

B & B INSTITUTE OF TECHNOLOGY, VVNAGAR

Computer Department

Subject Name: Scripting Language Python

Subject Code: 4330701

Semester : 3

Question Bank –Mid-2

Chapter (4 and 5)

- 1) What is function ? Explain about user defined function in python.
- 2) How to call a function in python .Explain with example.
- 3) Explain function without arguments.
- 4) Explain return statement in function.
- 5) Explain lambda function with example.
- 6) What is recursion ? Explain with example.
- 7) Explain arbitrary function with example
- 8) What is recursion ? Explain with example.
- 9) Differentiate module, package and library in python.
- 10) What is random module ? Explain random.random , random. randint , random. Randrange(x) ,random. randrange(x,y) with example.
- 11) What is math module ?Explain ceil, floor, fabs, factorial, fmod, gcd, pow, sqrt, .sin functions supported by math module with example.
- 12) What is datetime module? Explain 5 datetime modules with example.
- 13) How to access String elements using index operator ? explain with example.
- 14) Create a module to find out area and circumference of the circle and use this module in the python program.
- 15) Explain Basic functions: len, max, min.

Testing functions: isalnum, isalpha, isdigit, isidentifier, islower, isupper, and isspace.
Searching functions: endswith, startswith, find, rfind, count.
Manipulation functions: capitalize, lower, upper, title, swapcase, replace, lstrip, rstrip, strip.
Formatting functions: format, center, ljust, rjust with example.
- 16) Explain File handling functions :

Basic functions: open, close. Reading file: read, readline, readlines.
Writing file: write, append, writelines.
